

ALABAMA COMMUNITY DEVELOPMENT BLOCK GRANT PROGRAM

COMMUNITY NEED FACTORS

The attached is a compilation of both the absolute number and the percentage of low and moderate-income persons within each incorporated community and the unincorporated balance of each county in Alabama. Separate listings were compiled for incorporated communities under 3,000 population, incorporated communities with 3,000+ population, and the unincorporated balance of counties.

A base figure of \$27,308 was used to identify the low and moderate-income persons. This figure represents 80 percent of Alabama's median household income as reported in the 2000 Census.

A community's percent of low and moderate-income persons was determined by dividing the total number of households with incomes less than \$27,308 by the total number of households. The absolute number of low and moderate-income persons was obtained by multiplying the total population by the percent of low and moderate-income persons.

The attached data was compiled and produced by
Dr. Donald W. Bogie with the Center for Demographic
And Cultural Research, Auburn University at Montgomery (AUM)

Issued June 2002
